

DECLARATION OF BIODEGRADABILITY

Balloons are not made of plastic, instead, they are manufactured using 100% natural rubber latex, collected from the rubber tree (Hevea Brasiliensis), a material scientifically recognized as biodegradable.

When a latex balloon breaks into the environment, the substances are reabsorbed into the ecosystem, that's because there are no hazardous or toxic chemicals that are released during decomposition.

The tests were carried out by an independent laboratory, on balloons taken directly from the packaging, which have never been inflated or exposed to UV radiation, that means never subjected to atmospheric agents.

Laboratory: LAB ANALYSIS s.r.l. - Casanova Lonati (Pv)
Test Report n. 1805434-001 date 16/01/2019
Applicant's name CATTEX s.r.l. - Casalvieri (FR)
Type of sample: Balloons in natural rubber latex
Requested Analysis: Biodegradability
Analysis Method: UNI EN ISO 14855-1: 2013
RESULT: BIODEGRADABLE

CATTEX s.r.l.
Natalino Catalo
Technical Manager

A handwritten signature in black ink, appearing to read "Natalino Catalo".
